	Examiner James Sells	Art Unit 1734	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-18 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Saito et al (JP3-261540).

Saito discloses a continuous welding and cutting apparatus. As shown in the drawings, a receiving tool 12 with a vertical face 12b which is vertical to a rotational shaft of the receiving tool on an end face of the receiving tool and on the other hand, a horn tip 11 has both an outer periphery-facing part 11a having a face which faces and is close to the outer peripheral face 12a of the receiving tool and a vertical face-facing part 11b having a parallel face which faces to and is brought into contact with a vertical face 12b of the receiving tool. Welding of sheets 15a and 15b is produced by heat-generating action caused by ultrasonic vibration applied to the sheets from the outer periphery-facing part 11a and the outer peripheral face 12a of the receiving tool and cutting of the sheets is produced by melting based on heat-generating action caused by vibration applied to the sheets from the vertical face-facing part 11b and the vertical face 12b of the receiving tool. When the sheets are welded, as the outer peripheral face-facing part and the outer peripheral face of the receiving tool are not brought into direct contact with each other, abrasion of these parts remarkably less.
